Increase productivity by 50% or more
Save on paper, toner, shipping, faxing & storage
Enable telecommuting—process loans from home!
Go green and save the planet while you're at it!

Unleash the Power of your LOS

Paperless loan processing can revolutionize the way you do business. Storing, sharing and sending documents electronically is just the beginning. Many LOS and document management systems have workflow capabilities that let you manage the entire loan lifecycle and ensure all documentation requirements are met. To enable this functionality, each document in the loan must be identified. LoanStacker makes this possible without hours of manually naming files, and our consultants can configure your paperless processing workflow without months of trial and error.

Make paperless possible by making scanning simple.

www.LoanDocumentManagement.com

The Shortest Path to Paperless Loans

LoanStacker automates the process of scanning and labeling scanned loan documents using Optical Character Recognition to find unique keywords on each page. The scanned files are converted to PDF and uploaded to your LOS or document management system. LoanStacker can also re-sort the files according to investor stack orders you define, automating document delivery and making paper shuffling a thing of the past!
